

What is deep linking with Pluralsight?

Basics of deep linking offering:

SP or IdP initiated:

The URL templates differ

SSO implementation:

Mandatory

Templates for URLs:

Can be provided in a separate document

Course catalog:

Can be provided separately or pulled using our course API

Deep linking allows you to build a static URL that links directly to any course.

This link can be embedded inside an Learning Management System (LMS) or a company intranet. A simple “URL template” is available, allowing you to update links as necessary over time.

Steps:

1. Integrate Pluralsight SSO (documentation can be provided by your sales rep)
2. Choose courses you want to deep link to
3. Build URLs based on the URL templates
4. Embed the links in your LMS or intranet and watch training

Contact your sales rep to get started or to answer any SSO questions.
