<https://dev-pf.pluralsight.com/sp/ACS.saml2>

Endpoint URL Prod:

<https://prod-pf.pluralsight.com/sp/ACS.saml2>

Binding:

POST, Redirect

Additional Attributes:

First Name, Last Name, Email, Unique ID (e.g. employee id).

Entity ID Stage:

pluralsight-stage

Entity ID Prod:

www.pluralsight.com

Implement SSO to help your members easily get started, manage log-in credentials, increase usage and simplify license provisioning.

Steps:

1. Review documentation provided by your sales rep (this page and a deck)
2. Locate your correct internal technical resource and provide the “basics” to the left
3. Build “stage” metadata and provide it to your sales contact
4. Staging environment will be built and information provided to your internal technical resource for testing
5. After a successful test, information will be updated to production data, then retested and released
6. Start training and celebrate your access to the best tech training

Contact your sales rep to get started or to answer any SSO questions.
